The Client

Auto3P Romania develops and implements innovative solutions for the auto industry, and is a member of the Auto3P (Europe) AG group.

Challenges

Finding a complete solution that can lower the access time to the databases, protect the virtual information and develop growth strategies without additional investments in the physical infrastructure.

The Collaboration with Prime Telecom

The client decided to implement Prime Cloud, an Infrastructure as a Services type of technology. Through configuring the Prime services, we aimed to:

- Lower the access time regarding the writing and reading of the information from the databases;

- Offer scalability options for the company's resources according to the present and future needs of the client;

- Guarantee a stable Internet connection and a high capacity bandwidth;

- Raise the platform's security through VPN and Firewall to eliminate the risks of cyber breaches;

- Ensuring the voice services for the present and future development of the company.

Benefits & results

- ✅ Increase the quality of Auto3P services

- Shortening the access time towards the platform and databases;

- High availability of Auto3P's software;

- Securing the application through the implementation of a Firewall.

> *The collaboration with Prime Telecom's team brings to this day visible results and consistent performance of the Multifleet platform. We are delighted with this collaboration and the understanding that Prime Telecom showed us regarding our needs and objectives. What's more, the quality of the services and the detailed reports about the platform's performance support very well our client's requests and positions us as a trustworthy long-term partner. We plan to continue this partnership for as long as possible.*
